Application as [PLATZHALTER — bitte ausfüllen] — Reference [PLATZHALTER — bitte ausfüllen]

Dear Hiring Manager,

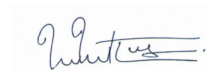

[PLATZHALTER — bitte ausfüllen]

At HealthTwist GmbH, I introduced strict code discipline into clinical data infrastructure. I refactored the R production pipeline for the DeGIR quality registry, which processes over 143,000 patient records from almost 300 clinics. I removed 257 hard-coded rules and reduced the codebase from 1,834 to 1,349 lines while guaranteeing identical byte-level outputs. This kind of work — the systematic clean-up of a live clinical production pipeline under GDPR constraints — is the actual day-to-day of clinical data teams, regardless of the medical specialty. The same methodology — configuration externalisation, systematic code modernisation, and byte-level verification — transfers to any R-based clinical pipeline that has grown organically over time.

My technical foundation stems from a PhD in Astrochemistry and several years of post-doctoral experience in scientific computing, complemented by recent specialisation in bioinformatics and biostatistics. I pair precise data modelling with deep R and tidyverse expertise. I also develop reproducible, high-throughput analysis workflows using Nextflow and Bioconductor. I use these tools to build and maintain auditable analysis pipelines for clinical registries and research data.

I am available from mid-April 2026. My salary expectation is [PLATZHALTER — bitte ausfüllen]. I look forward to discussing in a personal interview how my qualifications can directly support your team.

Sincerely

Dr. Thejus Mahajan
